

ATMI offers a range of level float contactors «EP», certified ACS (Certificate of Sanitary Conformity), conformable to the standard XP P 41-250 (1-2-3) and specially designed for intensive professional use

A range suitable for use with drinking water

MEANT FOR HUMAN CONSUMPTION !

- **Level regulator «EP» certified ACS**

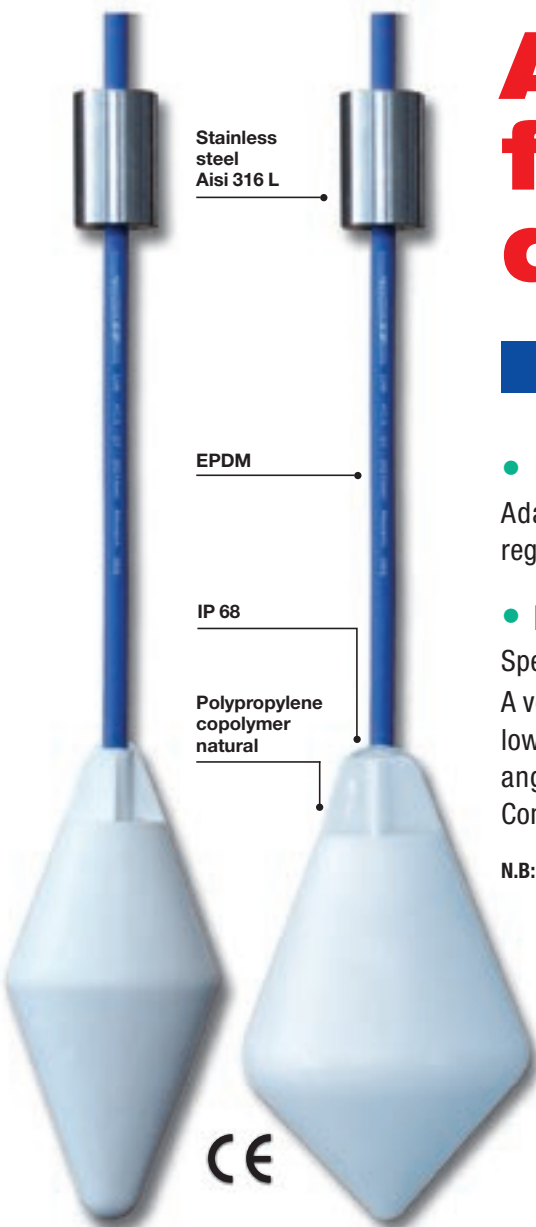

Adapted to all installation with several floats, with no limitation in the level regulation difference and in the number of pumps needed.

- **Level switch «EP» certified ACS**

Specially studied for rough fluids (water cistern, water tower, etc...).

A very cheap regulation system with a unique float working (the difference between low and high level depends on the conditions of installations). The working differential angle is 165°; this is the warranty of a smooth running of the pumps engines. Connection with or without relay according to the power of the pumps.

N.B: For more details, please refer to the technical forms.

ATMI is synonym of 30 models of level float contactors available in 150 versions. Our range is the most reliable, the easiest to install and the cheapest.

Our company, specialised in level float regulation systems, is certified ISO 9001-2000 version, ATEX for explosive areas, ACS for drinking water.
